

# Chapter 1

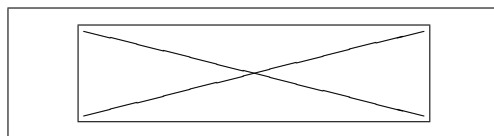

## Float Boxes with Beside Captions: Variants of Layout

In this sample are gathered all possible combinations with beside captions with all predefined base float styles. You may try to run this document with `shadowbox` frame: uncomment line with `\usepackage{fr-fancy}` at the preamble and lines below.

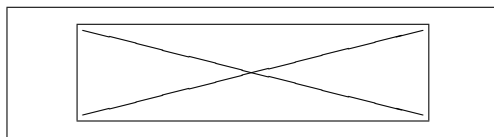

*Notes.*

- 1) All float styles with frames get `frameset={\fboxsep6pt}` to get more visible differences between fitted and non-fitted frames.
- 2) The fancy boxes `shadowbox` and `wshadowbox` do not make differences between `capbesideframe=yes` and `capbesideframe=no`.
